Metashape is a free and secure image software. This means it allows you to digitize and edit. There are lots of options for you to choose from, from Crop, Rotate, Auto Fix and Effects.Q: Determine if I am in an iframe In JavaScript how can I determine whether or not I am in an iframe? I only know that `iframe.contentDocument` is not working and I do not know if it's correct to assume that the "top" in `window.top` is the one of the parent window. A: jQuery provides a handy function to determine this. `var iframe = $("").attr('src', "").prop('frameborder', 0).prop('seamless', true); if (window.top !== window.self) { // not in an iframe } iframe.appendTo('body');` Take a look at the site `isSameOrigin()` in the CORS API. Get the `window.top` and the `iframe.contentWindow.top` to see if they're equal (or at least not different): // In iframe if (`window.top === window.contentWindow.top`) { // Same window } else { // Different windows High speed electron spin resonance of polar compounds. High speed (microsecond range) electron spin resonance (ESR) of the reactive liquid mixtures of oxygen and cystine (CSH) is reported. It is shown that CSH, together with quinine and tetramethyl thiuram disulfide (TMTD), is the most sensitive compound to the influence of reactive oxygen species in liquid mixture. The appearance of a characteristic peak (P = 2.55 GHz) in the ESR spectrum of CSH at 5-7 microM oxygen is observed in the time window of 0.5-4.0 microsec, that corresponds to the disappearance of the free radical signal. The ESR spectrum of 82157476af
